I enjoy building complex interfaces that are both enjoyable to use and easy to maintain. I work confidently with React, TypeScript, and Next.js, design architecture using the FSD approach, and never shy away from challenging tasks.

I have developed and maintained web applications, including intricate interfaces with drag-and-drop builders, KPI dashboards, and integrations with external services. I have participated in architectural design (three-tier architecture, modular systems, FSD methodology) and implemented type safety and optimization practices.

I don't just complete tasks — I strive to improve the product: initiating transitions to modern technologies, proposing architectural solutions, and turning fragmented internal tools into fully functional SaaS services. I quickly learn new technologies and deploy them to production, consistently meet deadlines, take initiative, and take responsibility for complex parts of the project.

Work Experience — over 5 year

January 2024 — Present (1 year 9 months)

Garant
Frontend Developer
Moscow, www.garant.ru

Industry: Information Technology, System Integration, Internet, Software development
System integration and automation of enterprise technological and business processes, IT consulting

2025 — Contract Creation Module
• Developed complex interfaces with specific business logic (React, Next.js, Redux, RTK, RTK Query, TypeScript)
• Performed optimizations — reduced the initial bundle size, resulting in a 1.5-second faster first load of the application
• Proposed module unification initiatives: development of new solutions accelerated and became easier to deploy for clients
• Developed a small, fully typed internal library used by both frontend and backend
• Mentored junior React developers within the team

2024 — интерфейс менеджера и KPI Dashboard
• Designed and developed a real-time KPI tracking dashboard (NestJS + React + WebSockets)
• Migrated the project to a modular architecture (FSD) → team began delivering new features faster
• Initiated and implemented a fullstack prototype module with an AI agent → feature became a key "kill-feature," doubling sales and scaling the product nationwide
• Worked on implementing a new UI for the project

April, Firma

Frontend Developer

Lermontov, www.april-garant.ru

2023 — Document Constructor (SaaS)

- Migrated an outdated local tool into a modern web application
- Participated in architecture design (SPA + REST API, FSD) and preparation of technical specifications
- Configured a custom Webpack build, enabling flexible adaptation of the project to different environments
- Developed frontend modules with drag-and-drop functionality, business calculations, and integrations with external APIs

The product became a commercial SaaS solution, generating additional revenue for the business. After this success, I was invited to the federal headquarters to develop solutions at the national level

2022 — Internal Administrative Panel
• Migrated the system from a monolithic Laravel MVC architecture to a SPA + API architecture (React + Laravel)
• Worked as a frontend developer while also taking on some backend API tasks• Использовал Utilized React, Redux, and React-Form

Project Participation

Frontend Developer

- Participated in projects for business process automation
- Worked as a freelancer creating websites, registration systems, and maintaining/updating existing code
- Communicated with clients and team members

Technologies used:
PHP, JavaScript, HTML, CSS, React, Redux, Laravel, Docker, Webpack

</td></tr>
</table>

Skills

Languages	Russian — Native, English — B1 (Intermediate)
Technical skills	JavaScript TypeScript REST API REST React Git Веб-программирование Frontend websocket Redux HTML HTML5 rtk fsd Next.js Nest.js Python Docker Grafana Prometheus Bitrix24 SSR SaaS Nginx Laravel FastAPI MySQL PostgreSQL Figma Redis FSD

Additional Information

- Experience with backend: NestJS, FastAPI, Laravel, Redis, WebSocket, LangChain, MySQL, PostgreSQL, Docker, Nginx
- Experience with deployment processes and collaborating with DevOps specialists
- Experience working with designers and project managers
- Confident with architecture and business processes, capable of proposing solutions rather than just writing code
